EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a facsimile sent by Leo Aubel on May 30, 2002.

The application has been amended as follows (Claim 19 now reads):

1. ~~19~~ In multi-node, multi-remote radio telephone systems, a method of call connection and call routing between said multiple nodes comprising:

- a) using destination number designations and routing tables to select different routes for different calls;
- b) utilizing directional or beam antennae for communications between said nodes;
- c) providing a first set of beams from a first node, and providing a second set of beams from a second node, a beam from the first node and a beam from the second node comprising a pair;
- d) measuring the signal strengths created by pairs of beams; and
- e) selecting a beam pair between different nodes with the highest signal strength, for communications by eliminating beam pairs that have the weaker signals, whereby the multi-nodes comprise base sites, repeaters, and exchanges, wherein the exchanges may be from different radio telephone systems.

(end of Amendment)

Art Unit: 2681

2. The Amendment was required in order to further clarify the applicant's invention to overcome a Final Rejection: the applicant had failed to claim the specific nature of the multi-nodes, which is significant to the call routing relationships uniquely defining the invention.

3. Claims 18 and 19 (in view of the above Examiner's Amendment) are allowed.

4. The following is an examiner's statement of reasons for allowance:

In claim 18, the present invention claims a multi-node, multi-remote radio telephone communication routing system, comprising routing tables to permit different destinations for different calls selectively based on telephone number indications, with blind nodes comprising a combination of a repeater and routing tables, selectively communicating with base sites, wherein each selected call route comprises a path that alternates between blind nodes and base sites. This call route alternation in the system as specified is not taught nor fairly suggested by the prior art.

In the examiner amended claim 19, the present invention claims a method of call routing and call connection in the system as described for claim 18 above. This method, whereby a path is connected between multiple base site, repeater, and exchange nodes that may be from different radio telephone systems, is not taught nor fairly suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
